# Outline

1. Introduction
2. Full-Scale Experimental Program
3. Computational Modeling
4. Parametric Study
5. Current Findings

1

# INTRODUCTION

# Project Goal & Objectives

**Project Goal: Develop a bridge system where prefabricated steel ABC units perform continuous for live load.**

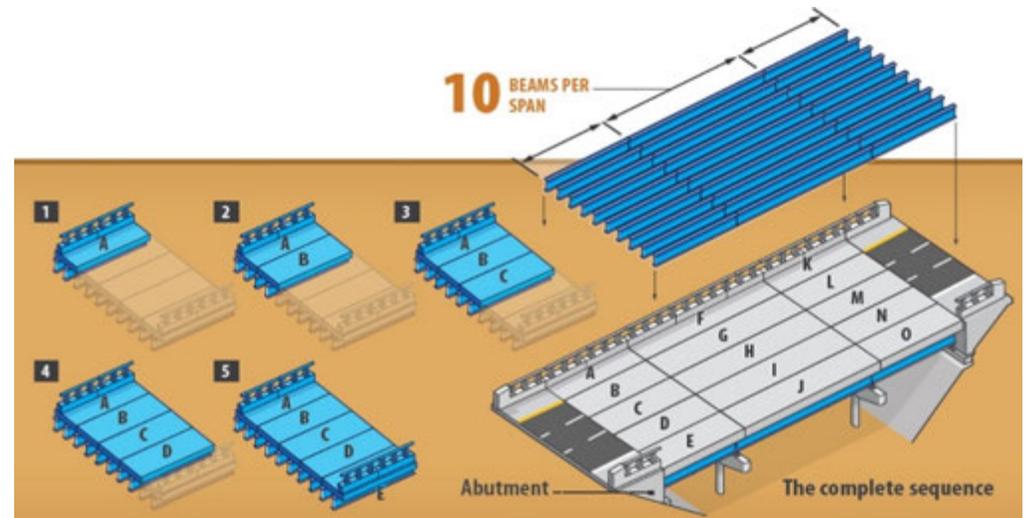

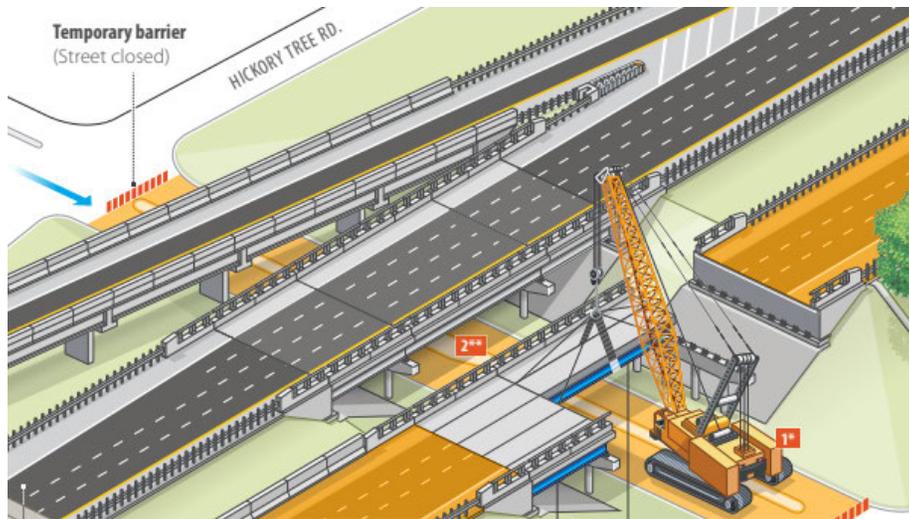

The objectives for this system are that it must be:

- Easily constructible
- Fast to assemble
- Durable long-term
- Safe
- Cost-effective

# Research Background

IH 635 at Old Seagoville in Dallas, Texas

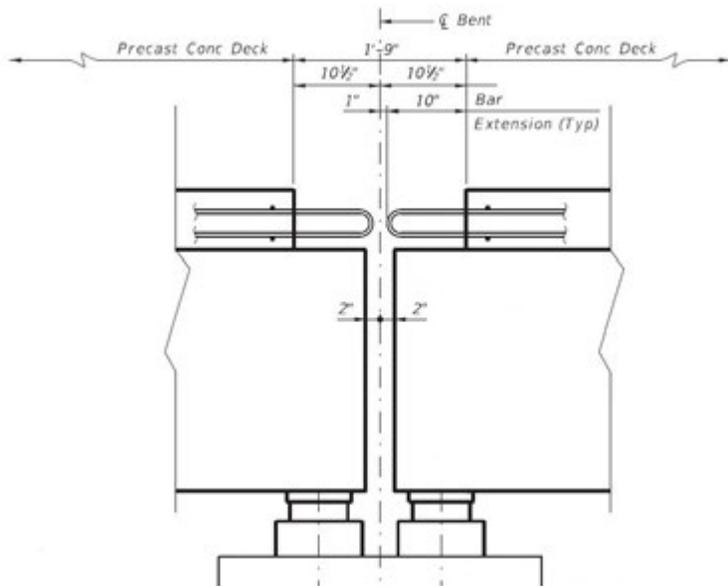

- Accelerated Bridge Construction

# Research Background

## IH 635 at Old Seagoville in Dallas, Texas

- Girder units simple span
- Continuous deck detail

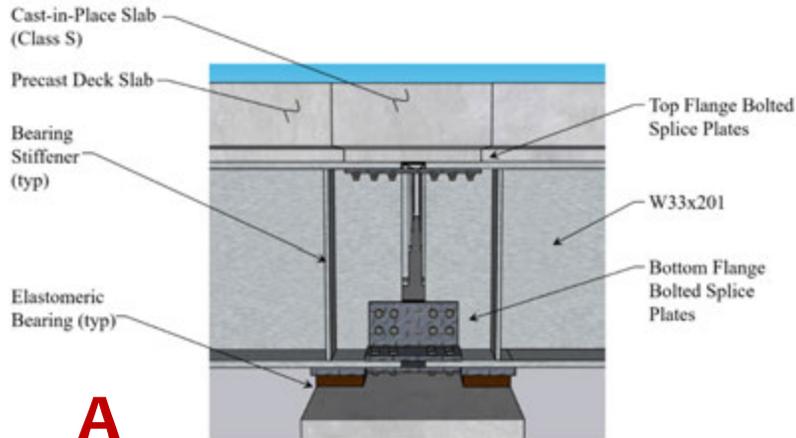

2

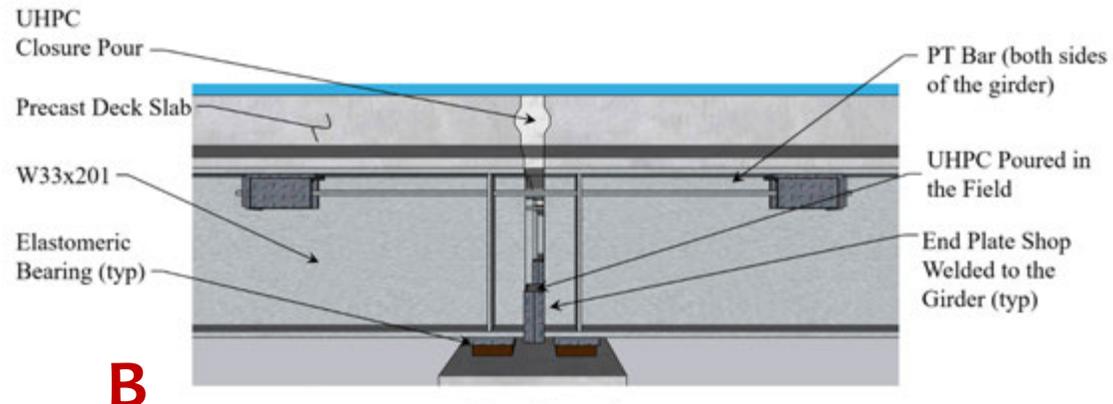

# FULL-SCALE EXPERIMENTAL STUDIES

1. Concept A
2. Concept B
3. Concept C
4. Concept D

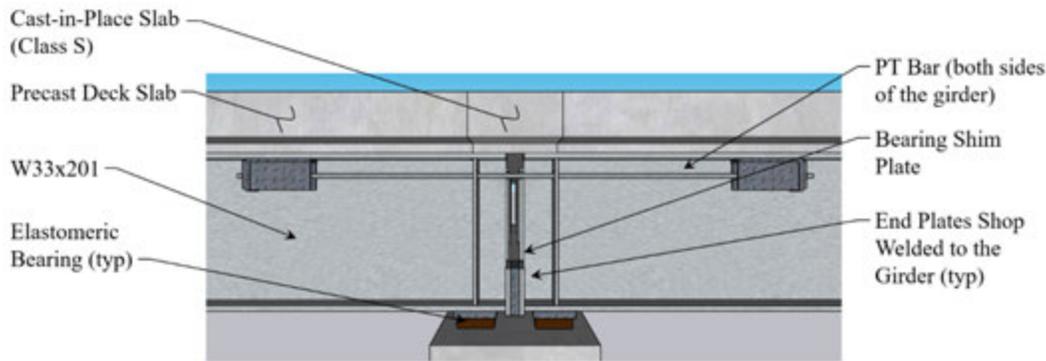

# System Development

**A**  
Bent Elevation

**B**  
Bent Elevation

# Full-Scale Experimental Studies

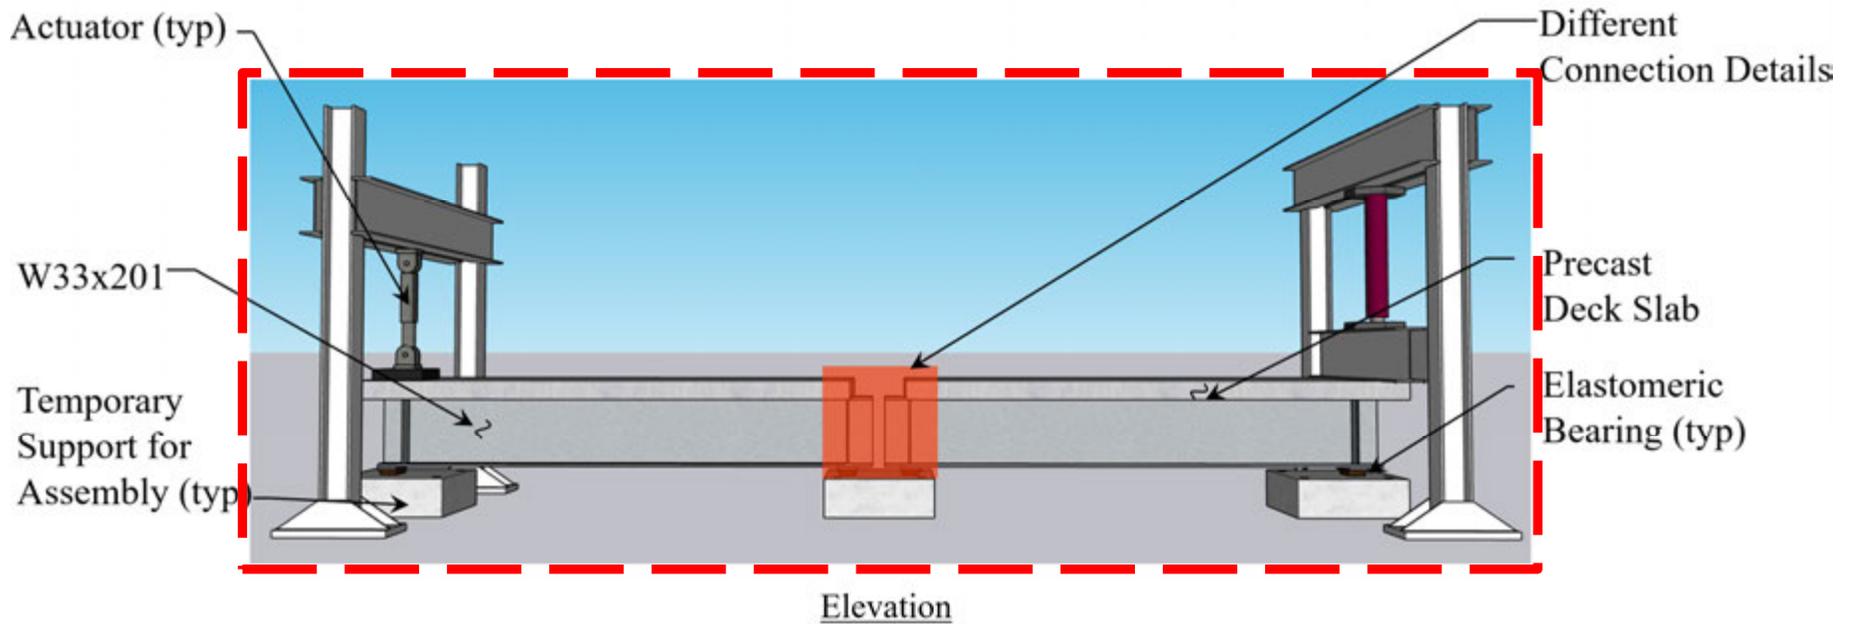

## Approach

- Benchmark Bridge Design

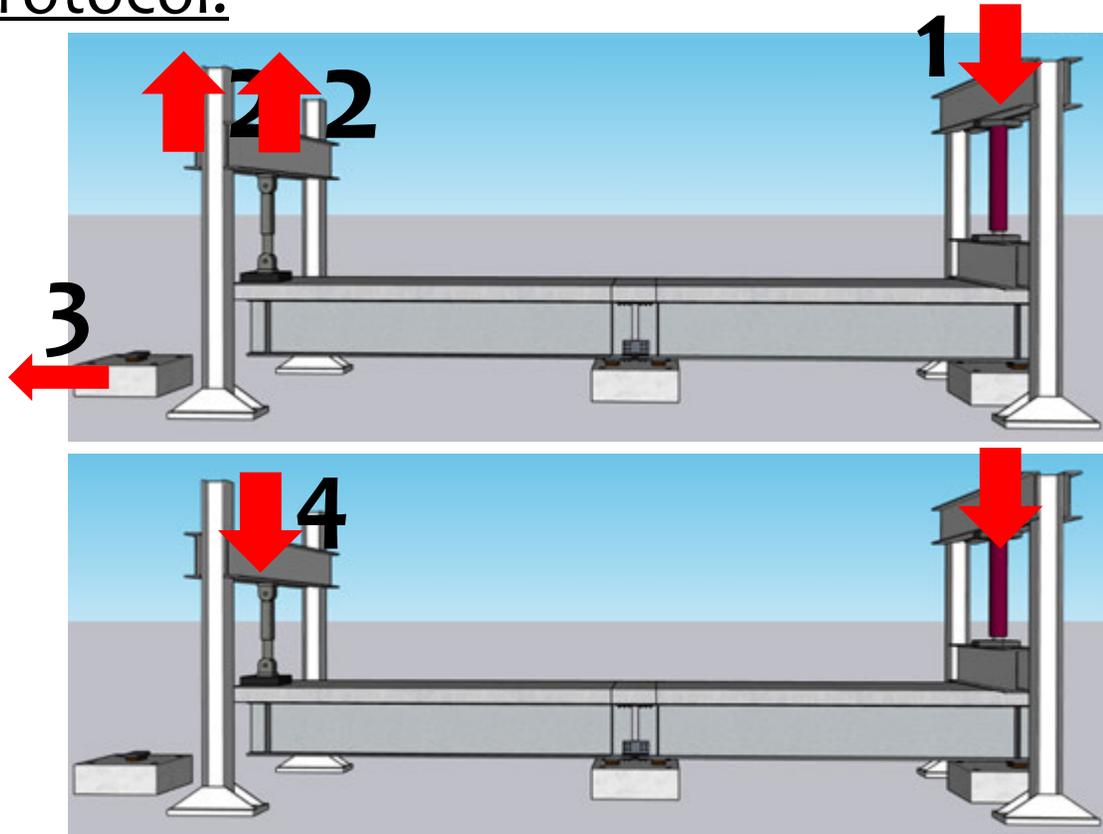

# Full-Scale Experimental Studies

## Laboratory Testing Setup

# Full-Scale Experimental Studies

## Concept Test Protocol:

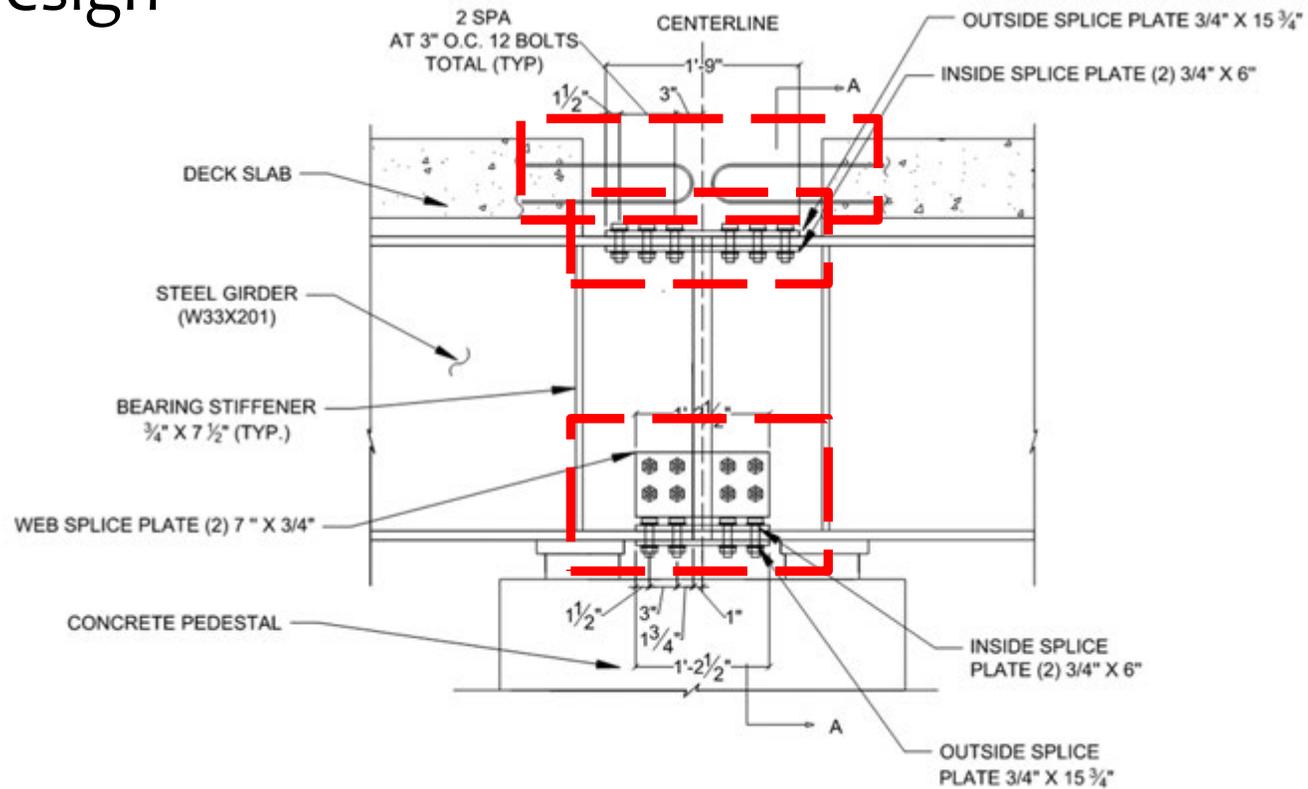

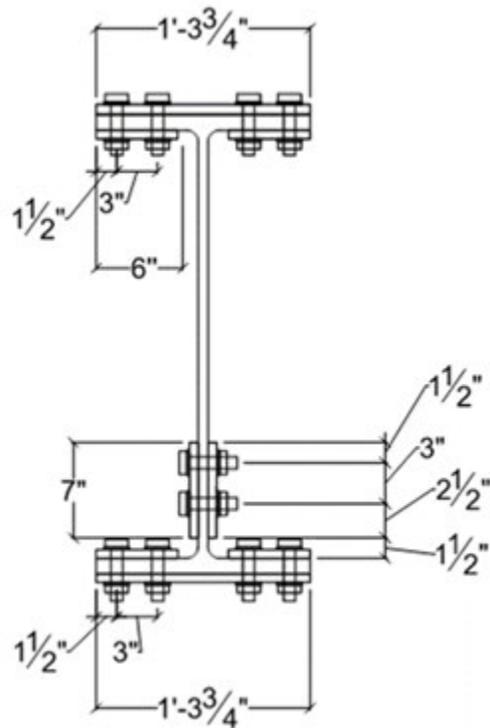

# Full-Scale Experimental Studies

## Loading (per Concept)

1. Static-level service loading - *Bending magnitude equivalent to HL-93 notional loading (28 kips from actuator)*
2. Dynamic level cyclic loading
3. Quasi-static ultimate strength testing

# CURRENT FINDINGS

# Current Findings

- The SDCL prefabricated ABC unit is a unique technique for bridge construction to
  - easily assemble precast units
  - reduce the construction time
  - decrease the construction-related cost.
- Experimental service level behavior was performed better than anticipated.
- Ultimate strength of Concept A and Concept C are adequate, which were above 200% of the equivalence HL-93 notional loading.

# Current Findings

- Validated FE models effectively simulated overall structural behavior, and captured more information on the specimen performance during the load application.
- Analytic study identified :
  - Failure mechanism
  - Elastic behavior
  - Cracked behavior
  - Post-yield behavior
  - Patterns of damage
- Parametric study was conducted to develop the Concept A & C hybrid system based on each concept FE model.
